## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 11/17/2003 has been entered.

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1 – 18 are rejected under 35 U.S.C. 102(e) as being anticipated by Reynolds et al (U.S. 6,411,993).

♦ As per claims 1, 6, 11,

Reynolds et al discloses a method for facilitating creation and manipulation of compilations of content selected by a user, comprising:

Art Unit: 2171

- "Providing a functional layer for interfacing over a network with a user interface and interfacing with a data repository containing a plurality of content entities."

See Fig. 3. In particular:

- "A functional layer" corresponds to the "Ibook server application 64"
  - "Interfacing over a network" corresponds to the "data network 52"
  - "A user interface" corresponds to the "client 54, 58, 60"
  - "Interfacing with a data repository containing a plurality of content entities" corresponds to "databases 66 – 76"
- "The functional layer comprising a plurality of function modules, each function pertaining to the creation or manipulation of a compilation of content." The Ibook server application 64 handles different functions such as directs the overall operation of Ibook databases 66 – 72 (col. 5 lines 23 – 28), enrollment functions, downloading tools to the user (col. 5 lines 67 – col. 6 lines 6), generating a viewer ID (col. 6 lines 32 – 33); therefore, the server must include plurality of modules to handle these functions.
  - "The plurality of function modules receives request from the user via the user interface and returns information concerning the compilation of content" See Fig. 9, in particular:
    - "Request from the user" corresponds to the "request desired passage from server" element 200 in Fig. 9 col. 11 lines 34 – 43.
    - "The user interface" corresponds to the interface shown in Fig. 8.

- “Returns information concerning the compilation of content” Fig. 9,  
element 206, col. 11 lines 43 – 45.
- ♦ As per claims 2 - 3, 7 – 8, 12 – 13,
  - “One of the function modules creates a list of content entity identifiers defining the content and order of a compilation.” See col. 9 lines 36 – 50. The server application 64 cause information to be stored in databases including the identities, time/date which identify the order of information also can be stored. When the user view the information, this information can represents as a list (col. 10 lines 45 – 57. The server also can provide an index that to be stored in database (col. 14 lines 46 – 51), or a list (col. 15 lines 54 – 60).
  - “ At least one function module manipulates the list to redefine the content” See col. 12 lines 9 – 11.
- ♦ As per claims 4 – 5, 9 – 10, 14 – 15,
  - “The compilation is hierarchically structured and wherein on of the function modules creates an outline of containers and content entity identifiers.” Reynolds teaches, “Various techniques may be used to represent the contents of ibook Web pages (e.g., the ibook Web pages in ibook Web pages database 76). For example, ibook Web pages may be represented by static data. Alternatively, ibook Web pages may be represented by code that is capable of generating the Web page contents, e.g., code that generates the entries of a table or list.” See col. 15 lines 54 – 60. Therefore, the compilation can also represent as a hierarchically structured.

Art Unit: 2171

- A "list" corresponds to the "outline."

◆ As per claims 16 – 18,

- " One of the function modules calculates a price for the compilation of content"

See Fig. 10, col. 12 lines 4 – 22.

### ***Response to Arguments***
